Premarital counseling-

Premarital counseling is a therapy which helps to prepare the couples mentally for marriage. The counseling helps to make sure that you and your spouse can have a strong and healthy relationship throughout your life. Premarital counseling helps to improve a couple's relationship before marriage.

Psychological Wellbeing-

Psychological well-being is very important for individuals whether they are living in the community, at work, or dealing with a crisis in life. In working to improve psychological well-being, in addition to preventing and treating mental and behavioral disorders, efforts are needed to reduce common environmental or mental stresses.

Adolescent coping strategies

Adolescence is a period of global changes, a time of turmoil and distress. It is a time of rapid physical changes accompanied by shifts in cognitive and emotional capacities. At the same time, adolescents grow out of their childhood years and aspire the status of an adult person. The development from childhood into young adulthood brings new cultural and societal opportunities and expectations. Salient adolescent stressors are romantic relations, peers or friends, school, parents, one's future, critical life events and idiosyncratic events. Probably, most dramatic are the biological changes associated with puberty. The biological changes of adolescence include hormonal changes leading to growth of secondary sex characteristics, growth in height and weight and changes in body composition (changes in bone, muscle and fat).

Tips to handle board exams-

The stress caused by exams -- internal or board exams -- is so much that it drives students to take extreme undesirable measures. The fear of these exams cast dire consequences upon students. The time which the students could have used in having a focused preparation goes wasted in worrying for the exams.

Sample Survey

The Students Counseling Centre conducted a sample survey for the II Year UG & II year PG Students from December 2021 – March 2022. The centre conducted the sample survey for both men and women students. The centre find out the students who have psychological problem by assessing an inventory called DASS (Depression, Anxiety, Stress Scale) and gave psychological counseling and make regular follow-ups for the students.

The students are classified into two categories

1. Category 1: Students who need immediate counseling
2. Category 2: Potential Cases which require attention by their tutors

As a part of survey student counselor will visit each department and inform students about counseling centre practices and how does it help for an individual and as a result many students started stepping in to the centre and started ventilating their worries and everything were noted confidentially.
