#### **7. ONE DAY STATE LEVEL SEMINAR ON “HEALTH ISSUES OF YOUTH IN INDIA: PROBLEMS AND PROSPECTS”**

The PG Department of Social Work, Jamal Mohamed College (Autonomous), Tiruchirappalli and Red Ribbon Club of Jamal Mohamed College organized a “One day State Level Seminar on Health Issues of Youth in India: Problems and Prospects” sponsored by TANSACS on 20<sup>th</sup> December 2010. In this context the seminar explores the serious health challenges of this vulnerable group facing within the context of local and global development. Socio-economic, cultural, educational and other factors affecting young people’s health are examined, and reference is made to particular issues and areas of concern. Emphasis is given to the importance of involving young people in identifying problems and developing solutions to ensure that programmes, policies and health services address for their needs.

As the youth population in India has been increasing over the years, so have the opportunities and problems for them. Youth today are spoiled for choices not only when it comes to securing an education and career but especially where lifestyle choices are concerned. However, the truth is that a majority of youth of the nation do not get the privilege of making this choice. Their lives are ridden with problems ranging from financial difficulties, to lack of educational opportunities, to unemployment and more - just because they were born into a particular stratum of society. The sooner we realise their potential as the future of the country, the sooner we will collectively benefit. Youth is a period of life which is heightened in its emotional aspects. The sexual drive is highest at this time of life, which the youth need to be able to control and sublimate through socially approvable behaviours. This is a period where right interaction with the opposite sex is learnt. The youth today faces with much greater pressures of coping with their living as compared with their parents. In most cases they have to move away from their parents to urban cities, some of them even settling in foreign countries. Housing, transport, medical services, care of the children, education of the children is some of the issues faced by the youth before marriage. Lack of social/familial support and guidance lay great personal responsibility on the youth to evolve their own life styles to successfully adapt to the society, keeping in view the social and family norms and expectations. Many a youth do not wish to conform to the social and familial norms and they wish to live in the society with unconventional value systems.

Youth of our nation is a strong driving force and plays a pivotal role in nation building and development. In recent times they are facing the challenges from modern urban society, drastically changing environment, confronting media messages and pressures of peers to

break free of various codes of the society. Youth concerns receive brief mention in assessments of mental health, violence and injury prevention, and HIV/AIDS prevention and care. Youth sexual and reproductive health is as yet largely underprotected by effective laws and policies. There is an urgent and ongoing need to address young people's sexual and reproductive health using a preventive, rights-based, gender-responsive and empowering approach. Relevant efforts should build on the creative energies of youth and respect their rights and capacities for participation and leadership in decisions that affect their lives. The sexual reproductive health problems are steeply rising in terms of teenage marriage and pregnancy, teenage pregnancy outside marriage, sexually transmitted diseases and HIV/AIDS. In the last few years, due to socio-economic and political factors, there have been increasing health problems among the youth: unemployment, suicide, alcoholism, sex-related offences and general adjustment problems in the youth. Today, the youth in India form one of the most vulnerable groups, who on the one hand are expected to be the leaders to determine the destiny of India, and on the other hand, are the exploited and confused group. The seminar explores the serious health challenges of this vulnerable group facing within the context of local and global development. Socio-economic, cultural, educational and other factors affecting young people's health are examined, and reference is made to particular issues and areas of concern. Emphasis is given to the importance of involving young people in identifying problems and developing solutions to ensure that programmes, policies and health services address for their needs.
