

DEPARTMENT OF COMPUTER SCIENCE

COURSE STRUCTURE & SYLLABI (For the students admitted from year 2023-2024 onwards)

Programme : M.Phil. Computer Science

JAMAL MOHAMED COLLEGE (AUTONOMOUS)
Accredited with A++ Grade by NAAC (4th Cycle) with CGPA 3.69 out of 4.0
(Affiliated to Bharathidasan University)
TIRUCHIRAPPALLI – 620 020

M.Phil. COMPUTER SCIENCE

Sem	Course Code	Course Category	Course Title	Hrs/Week	Credit	CIA Marks	ESE Marks	Total Marks
I	23MPCS1CC1	Core - I	Research Methodology	4*	4	25	75	100

Course Title	RESEARCH METHODOLOGY
---------------------	-----------------------------

SYLLABUS		
Unit	Contents	Hours
I	Introduction to Research: Meaning of Research – Objectives of Research – Motivation in Research – Types of Research – Research Approaches – Significance of Research – Research Methods versus Methodology – Research and Scientific Method – Importance of knowing how research is done – Research Process – Criteria of Good Research – Defining the Research Problem – Selecting the Problem – Necessity – Techniques involved in defining a problem – Research Design – Meaning – *Need* – Features of Good Design.	12
II	Thesis Writing: Literature Survey – Writing Reviews and Journal Articles – Publication of Papers – Planning a Thesis – General Format – Page and Chapter Format – *Footnotes* – Tables and Figures – References and Appendices.	12
III	Reliability: Definition of Reliability – Failure-Data Analysis - Hazard Models – Constant Hazard – Linearly-Increasing Hazard – The Weibull Model – * System Reliability * – Series Configuration – Parallel Configuration – Mixed Configuration – Applications to Specific Hazard Models – Related Problems.	12
IV	Sampling Theory and Testing of Hypotheses: *Types of Samples* – Parameter and Statistic – Tests of Significance – Procedure for Testing Hypothesis – Applications of t-test – t-test for Single Mean – Paired t-test for difference of means – F-test for equality of two Population variances – Analysis of Variance – Assumptions – Technique of Analysis of Variance – One Way Classification Model –Two Way Classification Model.	12
V	Research Tools: Introduction – SPSS – MATLAB – LaTeX – NS/2 – * Weka *	12
VI	Current Trends (For CIA only) – Mixed-Methods Research, Replication Studies, Open Science, Big Data Analytics, Qualitative Data Analysis, Mixed- Reality Research, Community-Based Research	

** Self Study

Course Outcomes		
Upon successful completion of this course, the student will be able to:		
CO No.	CO Statement	Cognitive Level (K-Level)
CO1	Practice mixture levels of Research insights like good design, approaches, significance, scientific methods, process, and its importance.	K3, K4
CO2	Classify and summarize the relevant literature survey, write journal review articles, and publish a good quality paper followed by planning thesis content.	K4
CO3	State the reliability, data analysis and applications to specific hazard models.	K4
CO4	Express the significance of samples, procedure for different testing hypotheses.	K4, K5
CO5	Demonstrate diverse kinds of advanced computing related research tools towards societal developments.	K5, K6

Relationship Matrix:

Course Outcomes (COs)	Programme Outcomes (POs)					Programme Specific Outcomes (PSOs)					Mean Score of COs
	PO1	PO2	PO3	PO4	PO5	PSO1	PSO2	PSO3	PSO4	PSO5	
CO1	3	2	2	3	2	3	1	2	3	2	2.3
CO2	2	3	3	2	1	3	2	2	3	1	2.2
CO3	3	3	2	2	2	3	3	1	2	3	2.4
CO4	2	3	2	2	3	3	3	1	2	2	2.3
CO5	3	3	1	2	2	1	3	2	2	3	2.2
Mean Overall Score											2.28
Correlation											Medium

Mean Overall Score = Sum of Mean Score of COs / Total Number of COs

Mean Overall Score	Correlation
< 1.5	Low
≥ 1.5 and < 2.5	Medium
≥ 2.5	High

Semester	Course Code	Course Category	Hours/Week	Credits	Marks for Evaluation		
					CIA	ESE	Total
I	23MPCS1CC2	CORE - II	4	4	25	75	100
Course Title		ADVANCED CONCEPTS IN COMPUTER SCIENCE					

SYLLABUS		
Unit	Contents	Hours
I	Design and Analysis of Algorithm: Analyzing and Designing Algorithms – Heap Sort – Quick Sort – Hash Tables – Binary Search Trees – Red-Black Trees – Dynamic Programming – Greedy Algorithms – B-Trees – Graph Algorithms – Minimum Spanning Trees – *Single-Source Shortest Paths* – All-Pairs Shortest Paths.	12
II	Digital Logic Circuit Design: Design of Combinational Circuits: Analysis Procedure – Design Procedure – Design of Course Code Converters – Implementation of Boolean Functions using Multiplexers – Design of Sequential Circuits: Analysis Procedure – Design Procedure – Design of Counters – Design with State Equations – Sequential Logic Implementation – * Design of Serial Adder using Sequential Logic Procedure * – Design of Accumulator.	12
III	Parallel Processing: Parallel Computer Structures – Architectural Classification Schemes – Parallel Processing Applications – Pipelining: An Overlapped Parallelism – Instruction and Arithmetic Pipelines – Principles of Designing Pipelined Processors – SIMD Array Processors – SIMD Interconnection Networks – Associative Array Processing – Multiprocessors Architecture and Programming – Functional Structures – Interconnection Networks – * Multiprocessor Scheduling Strategies *.	12
IV	Genetic Algorithm: Introduction to Genetic Algorithm – Working principle of GA – Differences between Genetic Algorithm and Traditional Methods – Terminology used in Genetic Algorithm – Genetic Operators – Selection – Crossover – Mutation – Parameters of GA – Designing the Genetic Structures – * Applications of Genetic Algorithm for Simple Optimization Problem * – Travelling Sales Man Problem – Other Applications.	12
V	Human Computer Interaction: The Human: Introduction – Human Memory – Thinking – Emotion – The Computer: Positioning, Pointing, and drawing – The Interaction: Models of interaction – Frameworks and HCI – Ergonomics – Paradigms: Paradigms for interaction – HCI in the software process: Usability Engineering – Design rationale – * Design Rules: Standards * – Guidelines – Golden rules and heuristics – HCI Patterns – Implementation Support: Programming the application – Evaluation Techniques: Goals of evaluation – Evaluation through expert analysis – Universal Design: Universal design principles – Multi-modal interaction – User Support: Requirements of user support – Approaches to user support.	12
VI	Current Trends (for CIA only): Quantum Computing, Explainable AI, Blockchain, Natural Processing Language, Human-Computer Interaction

Course Outcomes

Upon successful completion of this course, the student will be able to:

CO No.	CO Statement	Cognitive Level (K-Level)
CO1	Analyze and design algorithms by way of proposing alternate solutions.	K4
CO2	Infer the design concepts of combinational and sequential logic implementation	K4
CO3	Identify and match the parallel computer structures and its applications.	K3
CO4	Illustrate the genetic structures and relate applications of GA for different problems.	K2
CO5	Employ the knowledge of HCI paradigms, design rules, patterns and implementation and evaluation techniques with respect to user support.	K5 & K6

Relationship Matrix:

Course Outcomes (COs)	Programme Outcomes (POs)					Programme Specific Outcomes (PSOs)					Mean Score of COs
	PO1	PO2	PO3	PO4	PO5	PSO1	PSO2	PSO3	PSO4	PSO5	
CO1	3	3	3	0	3	3	0	0	0	3	1.8
CO2	3	3	2	3	2	3	2	3	2	2	2.5

Course Title	WIRELESS SENSOR NETWORKS
---------------------	---------------------------------

SYLLABUS		
Unit	Contents	Hours
I	Introduction and Overview of Wireless Sensor Networks – Applications of Wireless Sensor Networks – Basic Wireless Sensor Technology, Sensor Taxonomy, Wireless Network Environment, * Wireless Network Trends *.	12
II	Wireless Transmission Technology – Radio Technology primer, Available Wireless Technologies – Fundamentals of Medium Access Control (MAC) Protocols – MAC Protocols for WSNs: Schedule-Based Protocols and * Random- Access Based Protocols* – Case Study, IEEE 802.15 4LR WPAN, Standard Case Study.	12
III	Routing protocols for WSNs: Data Dissemination and Gathering – Routing Challenges and Design Issues: Network Scale and Time-Varying Characteristics – Resource Constraints – Routing Strategies in WSN – Energy Aware Routing, WSN Routing Techniques, Flooding and its Variants – Low-Energy Adaptive Clustering Hierarchy – Power-Efficient Gathering in Sensor Information Systems – *Directed Diffusion* – Geographical Routing.	12
IV	Transport Control Protocols for Wireless Sensors Network – * Traditional Transport Control Protocol *, Transport Protocol Design Issues, Examples of Existing Transport Control Protocol, Performance of TCP – Network Management for WSNs: Network Management Requirements – Network Management Design Issues – Issues Related to Network Management: Naming and Localization.	12
V	Operating Systems for WSNs: Operating System Design – Examples of Operating Systems – Tiny OS, Mate and MANTIS – Performance and Traffic Management: Performance Modeling – Performance Metrics – Basic Network Models – Simple Computation of System Life Span – * WSN Applications *.	12
VI	Current Trends (For CIA only): IoT, Edge Computing, Machine Learning, 5G Connectivity, Wireless sensor networks in Healthcare	

** Self Study

Text Book(s):

Course Outcomes		
Upon successful completion of this course, the student will be able to:		
CO No.	CO Statement	Cognitive Level (K-Level)
CO1	Analyze an overview of Wireless Sensor Networks (WSNs), its applications and trends.	K3
CO2	Define Wireless transmission technology, MAC protocols and some standard case study.	K2
CO3	Illustrate Routing protocols, challenges, design issues and techniques.	K3, K4
CO4	List the TCPs for WSN, and design issues related to network management.	K4
CO5	Indicate the Operating Systems for WSNs and predict the performance & traffic management	K5, K6

Relationship Matrix:

Course Outcomes (COs)	Programme Outcomes (POs)					Programme Specific Outcomes (PSOs)					Mean Score of COs
	PO1	PO2	PO3	PO4	PO5	PSO1	PSO2	PSO3	PSO4	PSO5

Course Title	DATA MINING
---------------------	--------------------

SYLLABUS		
Unit	Contents	Hours
I	Data Mining Functionalities – Classification of Data Mining Systems – Data Mining Task Primitives – Integration of a Data Mining System with a Database or Data Warehouse System – Major Issues in Data Mining – Data Preprocessing – Descriptive Data Summarization – *Data Cleaning* – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation.	12
II	Mining Frequent Patterns, Associations, and Correlations – Efficient and Scalable Frequent Itemset Mining Methods – Mining Various Kinds of Association Rules – From Association Mining to Correlation Analysis – Constraint–*Based Association Mining*.	12
III	Classification and Prediction – Issues Regarding Classification and Prediction – Classification by Decision Tree Induction – Bayesian Classification – Rule-Based Classification – Classification by Back propagation – Associative Classification – Lazy Learners – Prediction – *Accuracy and Error Measures* – Evaluating the Accuracy of a Classifier or Predictor – Model Selection.	12
IV	Cluster Analysis – Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – *Partitioning Methods* – Hierarchical Methods – Density-Based Methods –Grid – Based Methods – Model-Based Clustering – Clustering High-Dimensional Data – Constraint – Based Cluster – Outlier Analysis.	12
V	Mining Data Streams – Social Network Analysis – Spatial Data Mining – Multimedia Data Mining – Text Mining – Mining the World Wide Web – *Applications and Trends in Data Mining*.	12
VI	Current Trends (for CIA only): Streaming Data Mining, Big Data Mining, Multi Model Data Mining, Graph Mining	

** Self Study

Text Book(s):

Gupta, Introduction to Data Mining with Case Studies, Prentice Hall of India, 2008
Web Resource(s):
1. https://www.educba.com/data-science/data-science-tutorials/data-mining-tutorial/

Course Outcomes		
Upon successful completion of this course, the student will be able to:		
CO No.	CO Statement	Cognitive Level (K-Level)
CO1	Examine the types of the data to be mined and present a general classification of tasks and primitives to integrate a data mining system.	K4
CO2	Discover interesting patterns from large amounts of data to analyze and extract patterns to solve problems,make predictions of outcomes.	K4
CO3	Select and apply proper data mining algorithms to build analytical applications.	K3, K4
CO4	Cluster the high dimensional data for better organization of the data	K5
CO5	Comprehend the roles that data mining plays in various fields and manipulate different data mining techniques	K6

Relationship Matrix:

Course Outcomes (COs)	Programme Outcomes (POs)					Programme Specific Outcomes (PSOs)					Mean Score of COs

Course Title		SOFTWARE METRICS					

SYLLABUS		
Unit	Contents	Hours
I	Measurement in Software Engineering - The scope of software Metrics- The basics of measurement- The representational theory of measurement and models - Scales- Classification of software measures – Empirical investigation - *Planning formal experiments.*	12
II	Software metrics data collection - Storing and extracting. Analyzing the results of experiments - *Simple analysis technique* - Advanced methods – Statistical tests- Measuring internal product attributes- Reuse - Complexity.	12
III	Overview - Benefits of Software Measurement - Challenges in Software Measurement- Basic Object-Oriented Concepts - Properties of Metrics - Traditional and Object Oriented Metrics - Traditional Metrics Applied to OO Systems- Object Oriented Metrics - Chidamber and Kemerer’s Metrics Suite - * MOOD (Metrics for Object Oriented Design) Lorenz and Kidd’s suite of design metrics*.	12
IV	Cognitive Complexity Metrics - Cognitive Complexity Metrics for Procedure Oriented System - Cognitive Complexity Metrics for Object Oriented System. Class Complexity (CC) - Weighted Class Complexity (WCC) – Extended Weighted Class Complexity (EWCC) - Class Complexity due to Inheritance (CCI) - * Cognitive Code Complexity (CCC)* - Weighted Composite Complexity Measure (CwP).	12
V	Overview- Defining the Metric: AWCC - Calibration of Cognitive Weights for Attributes - Experimentation and Case Study - Analytical Evaluation of AWCC Comparison of AWCC with Existing Metrics. Defining the Metric:CWCBO - Calibration of Cognitive Weights for Couplings – Experimentation and Case Study - * Analytical Evaluation of CWCBO *- Comparison of CWCBO with CBO.	12
VI	Current Trends (For CIA only): Code Quality Metrics, Agile Metrics, Cloud Metrics, Data Analytics Metrics	

** Self Study

I	23MPCS1CC4	CORE – IV	4	4	25	75	100
Course Title		DIGITAL IMAGE PROCESSING					

SYLLABUS		
Unit	Contents	Hours
I	Elements of digital image processing systems, Vidicon and Digital Camera working principles, Elements of visual perception, brightness, contrast, hue, saturation, mach band effect, Color image fundamentals – RGB, HSI models, Image sampling, Quantization, dither, Two- dimensional mathematical preliminaries, 2D transforms – *DFT, DCT, KLT, SVD*.	12
II	Histogram equalization and specification techniques, *Noise distributions*, Spatial averaging, Directional Smoothing, Median, Geometric mean, Harmonic mean, Contra harmonic mean filters, Homomorphic filtering, Color image enhancement.	12
III	Image Restoration – degradation model, unconstrained restoration – Lagrange multiplier and constrained restoration, Inverse filtering-removal of blur caused by uniform linear motion, Wiener filtering, Geometric transformations-spatial transformations.	12
IV	Edge detection, Edge linking via Hough transforms – * Thresholding * – Region based segmentation – Region growing – Region splitting and Merging – Segmentation by morphological watersheds – basic concepts – Dam construction – Watershed segmentation algorithm.	12
V	Need for data compression, Huffman, Run Length Encoding, Shift Course Codes, Arithmetic coding, Vector Quantization, Transform coding, JPEG standard, * MPEG *	12
VI	Current Trends (for CIA only): Deep Learning, Generative Adversarial Networks (GANs), Real-time Processing, Image Fusion, Super Resolution, 3D Imaging, Mobile Image Processing

Course Outcomes		
Upon successful completion of this course, the student will be able to:		
CO No.	CO Statement	Cognitive Level (K-Level)
CO1	Recognize the fundamental concepts of a digital image processing system.	K1
CO2	Explain the different image enhancement and image restoration techniques	K2
CO3	Apply and review the 2D image transforms	K3, K4
CO4	Analyze the basic algorithms used for image segmentation and image compression with morphological techniques.	K4
CO5	Design and Synthesize Color image processing and its real world applications.	K5, K6

Relationship Matrix:

Course Outcomes (COs)	Programme Outcomes (POs)					Programme Specific Outcomes (PSOs)					Mean Score of COs

Course Title		NETWORK SECURITY					

SYLLABUS		
Unit	Contents	Hours
I	Introduction: Security Trends – The OSI Security Architecture – Security Attacks – Security Services – Security Mechanisms – A Model for Network Security – Classification Encryption Techniques: Symmetric Cipher Model – Substitution Techniques – Transposition Techniques – *Steganography*.	12
II	Block Ciphers and the Data Encryption Standard: Block Cipher Principles – The Data Encryption Standard – Advanced Encryption Standard: Evaluation Criteria for AES – The AES Cipher – More on Symmetric Ciphers: Multiple Encryption and Triple DES – *Stream Ciphers and RC4* – Public-Key Cryptography and RSA: Principles of Public-Key Cryptosystems – The RSA Algorithm.	12
III	Key Management: Key Management – Diffie-Hellman Key Exchange – Elliptic Curve Arithmetic – Elliptic Curve Cryptography – Message Authentication and Hash Functions: Authentication Requirements – Authentication Functions – Message Authentication Code Codes – Hash Functions – Security of Hash Functions and MACs – Hash and MAC Algorithms: Secure Hash Algorithm – HMAC – *CMAC*.	12
IV	Digital Signatures and Authentication Protocols: Digital Signatures – Authentication Protocols – Digital signature Standard – Authentication Applications: Kerberos – X.509 Authentication Service – Public-Key Infrastructure – *Firewalls: Firewall Design Principles* – Trusted Systems.	12
V	Electronic Mail Security: Pretty Good Privacy – IP Security: IP Security Overview – IP Security Architecture – Authentication Header – Encapsulating Payload – Combining Security Associations – Key Management – Web Security: Secure Socket Layer and Transport Layer Security – *Secure Electronic Transaction.*	12
VI	Current Trends (For CIA only): Zero Trust Architecture, Cloud Security, Artificial Intelligence and Machine Learning, Endpoint Security, Identity and Access Management (IAM), Cybersecurity Workforce Development, Internet of Things (IoT) Security

Course Title	CLOUD COMPUTING
---------------------	------------------------

SYLLABUS		
Unit	Contents	Hours
I	Introduction to Cloud Computing: Roots of Cloud Computing – Layers and Types of Cloud – Features of a Cloud – Infrastructure Management – Cloud Services – Challenges and Risks. Migrating into a Cloud: Introduction – Broad Approaches – *Seven Steps Model*. Integration as Service-Integration Methodologies – SaaS	12
II	Infrastructure as a Service: Virtual Machines – Layered Architecture - Life Cycle – VM Provisioning Process – Provisioning and Migration Services. Management of Virtual Machines Infrastructure – Scheduling Techniques - Cluster as a service – *RVWS Design* – Logical Design. Cloud Storage – Data Security in cloud Storage – Technologies.	12
III	Platform and Software as a Service: Integration of Public and Private Cloud – Techniques and tools – framework architecture – resource provisioning services – Hybrid Cloud. Cloud based solutions for business Applications – Dynamic ICT services – Importance of quality and Security in clouds – Dynamic Data center – case studies. Workflow Engine in the cloud – Architecture – Utilization. Scientific Applications for Cloud – Issues – Classification – SAGA – * Map Reduce Implementation*.	12
IV	Monitoring and Management: An Architecture for federated Cloud Computing – Usecase –Principles – Model – Security Considerations. SLA Management – Traditional Approaches to SLO – Types of SLA – Lifecycle of SLA – Automated Policy. Performance Prediction of HPC – * Grid and Cloud * – HPC Performance related issues.	12
V	Applications: Best Practices in Architecting cloud applications in the AWS cloud – Massively multiplayer online Game hosting on cloud Resources – *Building content delivery Networks using clouds* – Resource cloud Mashups.	12
VI	Current Trends (for CIA only): Serverless Computing, Hybrid Cloud, Multi- Cloud, Edge Computing

Course Title		BIG DATA ANALYTICS					

SYLLABUS		
Unit	Contents	Hours
I	Big Data – Characteristics of big Data – Domain specific examples of big data – Analytics flow for big data – Big data stack – Analytics – Analytics Types – Big data storage – *Mapping analytics flow of big data stack*.	12
II	Brief history of Hadoop - Hadoop core: Hadoop Distributed File System (HDFS) & Map Reduce (MR) & Hadoop Eco- systems: Hbase - Hive & R, Impala - Pig and Pig Latin – Sqoop – ZooKeeper – Avro - HDFS: Design of HDFS – concepts – * Hadoop file system* . Introducing Apache Hadoop: HDFS features - MR - MR features – Storage options on Hadoop – File formats and Compression formats – Introducing Apache Spark: History – What is Apache Spark? – MR issues – Spark’s stack. Hadoop plus Spark: Hadoop features – Spark features – *Installing Hadoop plus Spark clusters*.	12
III	Map Reduce Patterns: Numerical summarization (count, max-min) – Top-N – Filter – Binning – Sorting – Joins. Hadoop and MR: MR programming model – Hadoop YARN – *Hadoop MR Example: Find top N-words with map reduce*.	12
IV	Data Management (Data Models): Key Value Pair Data Bases (DB) - Document Store DBs – Column Store DBs – Graph Based DBs – Comparison of NOSQL databases. Data Visualization: Frameworks & Libraries: Lightning – Pygal – Seaborn – Visualization examples: Line chart - Scattor plot – *Bar chart* – Map chart – KDE	12
V	Frameworks: Spark MLlib – H2O – Clustering: k-means – Classification & Regression: Naïve Bayes (NB) – Decision Tree (DT) – *Random Forest (RF) – Support Vector Machines (SVM)*.	12
VI	Current Trends (for CIA only): AI and Machine Learning, Real time Analytics, Natural Language Processing, Graph Analytics

Course Outcomes		
Upon successful completion of this course, the student will be able to:		
CO No.	CO Statement	Cognitive Level (K-Level)
CO1	Able to understand vision of Internet of Thing and its characteristics	K2
CO2	To learn IoT related future Internet technologies	K2
CO3	Compare different protocols used in IoT	K4
CO4	Apply Federated cloud service management in IoT	K3
CO5	Evaluate and adapt the application areas of IoT	K5, K6

Relationship Matrix:

Course Outcomes (COs)	Programme Outcomes (POs)					Programme Specific Outcomes (PSOs)					Mean Score of COs
	PO1	PO2	PO3	PO4	PO5	PSO1	PSO2	PSO3	PSO4	PSO5	
CO1	3	3	2	1	3	3	2	2	1	3	2.3
CO2	3	3	2	3	2	3	2	3	2	2	2.5
CO3	3	2	3	2	3	2	3	2	3	2	2.5
CO4	2	3	2	2	3	3	3	2	2	2	2.4
CO5	3	2	1	3	1	3	2	1	3	3	2.2
Mean Overall Score											2.38
Correlation											Medium

Mean Overall Score	Correlation
< 1.5	Low
≥ 1.5 and < 2.5	Medium
≥ 2.5	High

Course Coordinator: Dr. D.I. George Amalarethinam
