SEMESTER I: CORE-I
REAL ANALYSIS

Course Code : 17PMA1C1 **Max. Marks : 100**
Hours/Week : 6 **Internal Marks : 25**
Credits : 5 **External Marks: 75**

Objective:

To test the convergence of sequences and series of functions and to study the concepts in integration .

Prerequisite:

This course requires the basic knowledge on real numbers, sequences and series, continuity and Riemann- Stieltjes integral.

UNIT I **18 hours**

Basic topology - # Metric spaces # - Compact sets - Perfect sets-Connected sets.

18 hours

UNIT II

Continuity-Limits of functions-Continuous functions-Continuity and compactness-Continuity and connectedness-Discontinuities-Monotone functions.

UNIT III **18 hours**

Differentiation-The Derivative of a real function-Mean value theorems-The continuity of Derivatives-L'Hospital's rule-Derivatives of Higher order-Taylor's Theorem – Differentiation of Vector - valued Functions.

UNIT IV **18 hours**

Riemann - Stieltjes integral - Definition and existence of the integral - #Properties of the integral# - Integration and differentiation - Rectifiable Curves.

UNIT V **18 hours**

Sequences and series of functions - # Uniform convergence # - Uniform convergence and continuity - Uniform convergence and integration - Uniform convergence and differentiation – Stone -Weierstrass theorem

 # # Self-study portion.

Text Books:

Walter Rudin, Principles of Mathematical Analysis, McGraw-Hill International Editions, Third Edition (1987).

UNIT I Chapter 2 Sections 2.15 - 2.47
UNIT II Chapter 4 Sections 4.1 – 4.31
UNIT III Chapter 5 Sections 5.1 – 5.19
UNIT IV Chapter 6 Sections 6.1 - 6.22, 6.26, 6.27
UNIT V Chapter 7 Sections 7.1 - 7.18, 7.26, 7.27

Books for Reference:

1. V. Ganapathy Iyer, Mathematical analysis, Tata McGraw-Hill Publishing Company, Ltd,(1977).
2. Gabriel Klambauer, Real Analysis, American Elsevier Publishing Company, INC, (1973).

Prepared by:

Mr. S. Masoothu
Mr. D. Dhamodharan
Ms. G. Mehboobnisha

SEMESTER I: CORE II
ALGEBRA

Course Code	**: 17PMA1C2**	**Max. Marks**	**: 100**
Hours/Week	**: 6**	**Internal Marks**	**: 25**
Credit	**: 5**	**External Marks**	**: 75**

Objective:

To provide foundation in group and to enhance the power of ideas for solving the problems in algebra.

Prerequisite:

This course requires the basic knowledge on groups, rings, fields and ideals.

UNIT I **18 hours**

#Basic properties on groups and sub groups # - Automorphisms on a group – Cayley's theorem - Another Counting Principle

UNIT II **18 hours**

Sylow's theorems– Direct products (Internal and External) of subgroups on a group

UNIT III **18 hours**

Polynomial Rings over the rationals - Polynomials over the rational field – Properties on Primitive polynomials – Polynomial rings over commutative rings

UNIT IV **18 hours**

Fields – Extension fields – algebraic extension and its properties – Roots of Polynomials – More about roots

UNIT V **18 hours**

The Elements of Galois theory – Finite fields

 # # Self-study portion.

Text Book:

I. N. Herstein, Topics in Algebra, Second Edition, John Wiley & Sons, Pvt., Ltd. New York, (2011).

UNIT I	Chapter 2	Sections	2.8, 2.9, 2.11
UNIT II	Chapter 2	Sections	2.12 , 2.13
UNIT III	Chapter 3	Sections	3.9 – 3.11
UNIT IV	Chapter 3	Sections	5.1, 5.3, 5.5
UNIT V	Chapter 5	Sections	5.6 and Chapter 7 Section 7.1

Books for Reference:

1. P.B. Bhattacharya, S.K. Jain and S.R. Nagpaul, Basic Abstract Algebra, Second Edition, Cambridge University Press , (1995).
2. John B. Fraleigh, A First Course in Abstract Algebra, Addison Wesley Publishing Company (1970).

Prepared by:

Dr. A. Solairaju
Mr. D. Dhamodharan
Ms. B. Shafina Banu

SEMESTER I: CORE-III

ORDINARY DIFFERENTIAL EQUATIONS

Course Code :17PMA1C3 **Max. Marks : 100**
Hours/Week : 6 **Internal Marks : 25**
Credits : 4 **External Marks: 75**

Objective:

To learn Mathematical methods to solve higher order ordinary differential equations and apply to dynamical problems of practical interest.

Prerequisite:

This course requires the basic knowledge on differentiation and problem solving in differentiation.

UNIT I **18 hours**

Second order linear Equations- #The general solution of the Homogeneous equation#- The Use of a known solution to find another- The Homogeneous equation with constant coefficients- The method of variation of parameters.

UNIT II **18 hours**

Oscillations and the sturm separation theorem – The sturm comparison theorem - Series solutions of First order equations-Second order linear equations-ordinary points.

UNIT III **18 hours**

Regular singular points-Regular singular points (continued) - Gauss's Hypergeometric equation- #The point at Infinity#.

UNIT IV **18 hours**

Legendre Polynomials – Properties of Legendre Polynomials – Bessel functions –#The Gamma function# – Properties of Bessel functions.

UNIT V **18 hours**

Linear systems- Homogeneous linear systems with constant coefficients – The method of successive approximations – Picard's theorem.

 # # Self-study portion.

Text Book:

G.F.Simmons, Differential Equations with Applications and Historical notes, second editon, Tata McGraw-Hill Publishing company Ltd, New Delhi, 2003.

UNIT I Sections 14, 15, 16, 17, 19
UNIT II Sections 24, 25, 27, 28
UNIT III Sections 29, 30, 31, 32
UNIT IV Sections 44, 45, 46, 47
UNIT V Sections 55, 56, 68, 69

Books for Reference:

1. Earl.A .Coddington, An Introduction to Ordinary Differential equations,PHI,1961.
2. M.D.Raisinghania, Advanced Differential Equations, Seventh Revised Edition S.Chand and Company Ltd, New Delhi, 2000.

SEMESTER I: CORE – IV
NUMERICAL ANALYSIS

Course Code	**: 17PMA1C4**	**Max. Marks**	**: 100**
Hours/Week	**: 6**	**Internal Marks**	**: 25**
Credit	**: 4**	**External Marks**	**: 75**

Objective:

To develop a sound knowledge and appreciation of the ideas and concepts related to polynomials, interpolation, and to give a strong foundation to take up advanced level courses in analysis.

Prerequisite:

This course requires the basic knowledge on iteration methods, interpolation, approximation, differentiation and integration.

UNIT I **18 hours**

Iteration method based on Second degree equations - Chebyshev Method – Multipoint Iteration Methods – Bridge Vieta Method – Baristow Method – Graeffe's root Squaring Method.

UNIT II **18 hours**

Iteration Methods - Jacobi Method - Guass Seidel Method - Successive Over Relaxation Method – Iterative Method for A^{-1} – #Eigen Values and Eigen Vectors# – Jacobi Method for symmetric Matrices - Power Method.

UNIT III **18 hours**

Interpolation and Approximation – Hermite Interpolation – Piecewise cubic Interpolation and cubic Spline interpolation – Bivariate interpolation – Lagrange and Newton's Bivariate interpolation – #Least Square approximation# – Gram-Schmidt Orthogonalizing Process.

UNIT IV **18 hours**

Differentiation and Integration: Numerical Differentiation – Methods Based on Interpolation – Partial Differentiation – Numerical Integration – Methods Based on Interpolation – Methods Based on Undetermined Coefficients – Gauss Quadrature methods - Gauss Legendre and Gauss Chebyshev Integration Methods – Double Integration – Trapezoidal and Simpson's Rule – Simple Problems.

UNIT V **18 hours**

Ordinary Differential Equations: Numerical Methods – Euler Method – #Backward Euler Method# – Mid-Point Method – Runge-kutta Methods – Implicit Runge-Kutta Methods – Predictor – Corrector Methods.

 # # Self-study portion.

Text Book:

M.K. Jain, S.R.K. Iyengar, R.K. Jain, Numerical Methods for Scientific and Engineering Computation, Fourth Edition (2004).

UNIT I	Chapter II	Sections 2.4, 2.9
UNIT II	Chapter III	Sections 3.4, 3.7, 3.11
UNIT III	Chapter IV	Sections 4.5, 4.6, 4.7, 4.9
UNIT IV	Chapter V	Sections 5.2, 5.5, 5.6, 5.7, 5.8, 5.11
UNIT V	Chapter VI	Sections 6.3, 6.4, 6.7

Books for Reference:

1. Samuel. D. Conte and Carl De Boor, Elementary Numerical Analysis, Third Edition (1965).

2. F.B. Hildebrand, Introduction to Numerical Analysis, Tata McGraw Hill (1979).

SEMESTER I: ELECTIVE – I

C++ PROGRAMMING

Course Code : 17PMA1CE1AT	**Max Marks : 50**
Hours/Week : 3	**Internal Marks : 10**
Credit : 2	**External Marks : 40**

Objective:

To introduce the benefits of using C++ and object-oriented programming techniques for application development and write programs for a wide variety problems in mathematics.

Prerequisite:

This course requires the basic knowledge on C programming.

UNIT I **9 Hours**

Object-Oriented Programming Paradigm – Basic concepts of Object-oriented Programming – What is C++ – A simple C++ program – More C++ statements – An example with class – Structure of C++ program – Keywords – Identifiers and Constants – Basic Data types – User defined data types – Derived data types – Symbolic constants – Declaration of variables – Reference variables – Operators in C++ - Scope resolution operators – Expressions and their types – Control structures.

UNIT II **9 Hours**

Functions in C++ - The main function – Function prototyping – Call by reference – Return by reference – Inline functions – Function overloading – Specifying a class – Defining member functions – Nesting of member functions – Private member functions – Arrays within a class – Arrays of Objects – Objects as function arguments – Friendly functions – Returning Objects – Pointers to members.

UNIT III **9 Hours**

Constructors – Parameterized constructors – Multiple constructors in a class – constructors with default arguments – Copy constructor – constructing two-dimensional arrays – Destructors – Defining operator overloading – Overloading unary operators - Overloading binary operators - Overloading binary operators using friends.

UNIT IV **9 Hours**

Inheritance – Defining derived classes – Single inheritance – Making a private member inheritable – Multilevel inheritance – Multiple inheritance – Hierarchical inheritance – Hybrid inheritance – Virtual base classes.

UNIT V **9 Hours**

Working with files – Introduction – classes for file stream operations – Opening and closing a file – Detecting End-of-File – File pointers and their manipulations – Sequential input and output operations – Updating a file: Random access – Error handling during file operations – Command-Line-Arguments.

Text Book:

E. Balagurusamy, Object Oriented Programming with C++, Second Edition, TMH, 2008.

UNIT I Chapter 1 - 1.4, 1.5; Chapter 2 – 2.1, 2.3, 2.4, 2.5, 2.6
Chapter 3 – 3.3 to 3.8; 3.10, 3.12, 3.13, 3.14, 3.19, 3.24

UNIT II Chapter 4 – 4.2 to 4.6; 4.9; Chapter 5 – 5.3, 5.4, 5.7, 5.8, 5.9, 5.13 to 5.16; 5.18

UNIT III Chapter 6 – 6.2 to 6.5; 6.7, 6.9, 6.11, Chapter 7 – 7.2 to 7.5

UNIT IV Chapter 8 – 8.2 to 8.9

UNIT V Chapter 11 – 11.1 to 11.4; 11.6 to 11.10

Reference Books:

1. Herbert Schildt, The Complete Reference C++, Fourth Edition, TMH,2003.
2. K.R.Venugopal, Raj Kumar and T.Ravi Shankar, Mastering C++, TMH,2005.

Prepared by:

SEMESTER I: ELECTIVE – I

C++ PROGRAMMING - PRACTICAL

Course Code : 17PMA1CE1AP	**Max Marks : 50**
Hours/Week : 3	**Internal Marks : 10**
Credit : 2	**External Marks : 40**

Objective:

To enable the students to acquire programming skills by applying various features of C++ Language.

Prerequisite:

This course requires the basic knowledge on C programming and text editor.

List of Practical:

1. Develop a C++ Program using functions.
2. Develop a C++ Program to implement the function overloading.
3. Develop a C++ Program to implement the Friend, Inline and Virtual Functions.
4. Develop a C++ Program to implement classes and objects.
5. Develop a C++ Program to implement Arrays of Objects.
6. Develop a C++ Program to implement constructors and destructors.
7. Develop a C++ Program to add two complex numbers using Operator Overloading.
8. Develop a C++ Program to multiply two matrices using Operator Overloading.
9. Develop a C++ Program to implement Pay Bill application by using Inheritance.
10. Develop a C++ Program to implement Mark List Application by using Files.

Prepared by:

Dr. M. Mohamed Jabarulla
Dr. S. Sajitha Begum
Mr. H. Sheik Mujibur Rahman

SEMESTER I: ELECTIVE – I
CONTROL THEORY

Course Code : 17PMA1CE1B **Max. Mark : 100**
Hours/Week : 6 **Internal Mark : 25**
Credit : 4 **External Mark : 75**

Objective:

To study observability, controllability, stability and optimal control of linear systems.

Prerequisite:

This course requires the basic knowledge on differential equations and functional.

UNIT I **18 hours**

Observability: Linear Systems – Observability Grammian – Constant coefficient systems – Reconstruction kernel – Nonlinear Systems

UNIT II **18 hours**

Controllability: Linear systems – Controllability Grammian – Adjoint systems – Constant coefficient systems – steering function – Nonlinear systems

UNIT III **18 hours**

Stability: tability – Uniform Stability – Asymptotic Stability of Linear Systems - Linear time varying systems – Perturbed linear systems – Nonlinear systems

UNIT IV **18 hours**

Stabilizability: Stabilization via linear feedback control – Bass method – Controllable subspace – Stabilization with restricted feedback

UNIT V **18 hours**

Optimalcontrol: Linear time varying systems with quadratic performance criteria – Matrix Riccatiequation – Linear time invariant systems – Nonlinear Systems

Text Book:

Elements of Control Theory by K.Balachandran and J.P.Dauer, Narosa, New Delhi, 1999.

UNIT I Chapter 2
UNIT II Chapter 3 Sections 3.1 - 3.3
UNIT III Chapter 4
UNIT IV Chapter 5
UNIT V Chapter 6

Books for Reference:

1. Linear Differential Equations and Control by R.Conti, Academic Press,London, 1976.
2. Functional Analysis and Modern Applied Mathematics by R.F.CurtainandA.J.Pritchard, Academic Press, New York, 1977.
3. Controllability of Dynamical Systems by J.Klamka, Kluwer AcademicPublisher, Dordrecht, 1991.
4. Mathematics of Finite Dimensional Control Systems by D.L.Russell, MarcelDekker, New York, 1979.
5. E.B. Lee and L. Markus, Foundations of optimal Control Theory, John Wiley,New York, 1967.

Prepared by:

Dr. R. Jahir Hussain

SEMESTER II: CORE-V
TOPOLOGY

Course Code : 17PMA2C5	**Max. Marks : 100**
Hours/Week : 6	**Internal Marks : 25**
Credits : 5	**External Marks: 75**

Objective:

To study topological spaces, continuous functions, connectedness, compactness, countability and separation axioms and complete metric spaces.

Prerequisite:

This course requires the basic knowledge on mapping between sets, open sets, limits, continuity, convergence, metric space and geometrical structure.

UNIT I **18 hours**

Topological spaces - Basis for a topology- Order topology, product topology- Subspace topology- Closed sets and limit points - Continuous functions - # Product Topology #.

UNIT II **18 hours**

Metric topology - Metric topology (continued) - Connected spaces.

UNIT III **18 hours**

Compact spaces - Limit point compactness - Tychonoff theorem.

UNIT IV **18 hours**

Countability Axioms - Separation axioms - Urysohn Lemma - Urysohn Metrization theorem -Completely regular spaces.

UNIT V **18 hours**

Complete Metric Spaces - Compactness in metric spaces - Baire Spaces.

 # # Self-study portion.

Text Book:

James R. Munkres, Topology A First Course, Prentice Hall of India, (1998).

UNIT I	Sections 2.1 - 2.8
UNIT II	Sections 2.9, 2.10, 3.1
UNIT III	Sections 3.5, 3.7, 5.1
UNIT IV	Sections 4.1 - 4.4, 5.2
UNIT V	Sections 7.1, 7.3, 7.7

Books for Reference:

1. Sze-Tsen Hu, Elements of General Topology, Holden Day, INC. (1964).
2. K.D. Joshi, Introduction to General Topology, Wiley Eastern Ltd. (1983).

Prepared by:

Dr. A. Nagoor Gani

Ms. G. Mehboobnisha

Mr. M. Sathik Jaseen

SEMESTER II: CORE-VI
COMPLEX ANALYSIS

Course Code	**: 17PMA2C6**	**Max. Marks**	**: 100**
Hours/Week	**: 6**	**Internal Marks**	**: 25**
Credits	**: 5**	**External Marks:**	**75**

Objective:

To introduce advanced concepts of complex analysis.

Prerequisite:

This course requires the basic knowledge on analytic function, complex integration and power series.

UNIT I **18 hours**

Fundamental theorems – Line integrals - Rectifiable arcs - Line integrals as functions of arcs -Cauchy's theorem for a rectangle - Cauchy's theorem in a disk. Cauchy's integral formula – Index of a point with respect to a closed curve - Integral formula for higher derivatives.

UNIT II **18 hours**

Local properties of analytical functions – Removable singularities - Taylor's theorem - Zeros and poles. Local mapping - Maximum principle. General form of Cauchy theorem – Chains and cycles -Simple connectivity - Homology.

UNIT III **18 hours**

General statement of Cauchy's theorem - Proof of Cauchy's theorem - Locally exact differentials. Calculus of residue - Residue theorem - Argument principle - Evaluation of definite integrals.

UNIT IV **18 hours**

Harmonic functions – Definition and basic properties – Mean-value property - Poisson's formula- Schwartz's theorem - Reflection principle. Power series expansions – Weierstrass's theorem – Taylor series - Laurent series.

UNIT V **18 hours**

Partial fractions and factorization – Partial fractions - Infinite products - Canonical products -Gamma functions.

Text Book:

Lars. V. Ahlfors, Complex Analysis, McGraw Hill International Edition, Third Edition (1979).

UNIT I	Chapter 4 Sections 1.1 - 1.5, 2.1 - 2.3.
UNIT II	Chapter 4 Sections 3.1 - 3.4, 4.1 - 4.3.
UNIT III	Chapter 4 Sections 4.4 - 4.6, 5.1 - 5.3
UNIT IV	Chapter 4 Sections 6.1 - 6.5 Chapter 5 Sections 1.1 - 1.3
UNIT V	Chapter 5 Sections 2.1 - 2.4

Books for Reference:

1. Jacob Sonnenschein and Simon Green, Elements of Complex analysis, Dickenson Publishing Company, INC. (1977).

2. S. Ponnusamy, Foundations of Complex Analysis, Narosa Pvt. Ltd., Second Edition (2008).

Prepared by:

Dr. R. Jahir Hussain
Ms. B. Fathima Kani
Mr. M. Sathik Jaseen

SEMESTER II: CORE VII
LINEAR ALGEBRA

Course Code : 17PMA2C7 **Max. Marks : 100**
Hours/Week : 6 **Internal Marks : 25**
Credit : 4 **External Marks : 75**

Objective:

To understand the various aspects of Linear Algebra and to train in problem-solving skill.

Prerequisite:

This course requires the basic knowledge on vector space, linear independent and dependent and linear map.

UNIT I **18 hours**

#Systems of linear Equations# – Matrices and Elementary Row operations – Row-Reduced echelon Matrices – Vector spaces – Subspaces – Bases and Dimension.

UNIT II **18 hours**

#Linear transformations# - Algebra of linear transformations – Isomorphism of Vector Spaces – Representations of Linear Transformations by Matrices - Linear Functionals - Double Dual – Transpose of a Linear Transformation.

UNIT III **18 hours**

#Polynomials# - Algebra of polynomials – Lagrange Interpolation – Polynomial Ideals – Prime factorization of a polynomial – Determinant functions – Permutations and uniqueness of determinants – Classical Adjoint of a (Square) matrix – Inverse of an invertible matrix using determinants.

UNIT IV **18 hours**

Characteristic values – Annihilating polynomials – Invariant subspaces - Simultaneous triangulation and simultaneous diagonalization.

UNIT V **18 hours**

Direct - Sum Decompositions – Invariant Direct sums – Primary Decomposition theorem.

 # # Self- study portion.

Text Book:

Kenneth Hoffman, Ray Alden Kunze, Linear Algebra, Prentice Hall of India Private Limited, New Delhi, Second Edition (2010).

UNIT I Chapter 1 Sections 1.2 - 1.4 and Chapter 2 Sections 2.1 – 2.3.
UNIT II Chapter 3 Sections 3.1 - 3.7.

UNIT III Chapter 4 Sections 4.2 - 4.5 and Chapter 5 Sections 5.2 - 5.4 .
UNIT IV Chapter 6 Sections 6.1 - 6.5.
UNIT V Chapter 6 Sections 6.6 - 6.8.

Books for Reference:

1. I. N. Herstein, Topics in Algebra, John Wiley & Sons Pvt. Ltd., Second Edition (2000).
2. S. Kumaresan, Linear Algebra: A Geometric Approach, Prentice Hall of India Ltd. (2004).

Prepared by:

Dr. A. Solairaju
Mr. D. Dhamodharan
Ms. K. Prasanna Devi

SEMESTER II: CORE-VIII
PARTIAL DIFFERENTIAL EQUATIONS

Course Code :17PMA2C8 **Max. Marks : 100**
Hours/Week :6 **Internal Marks : 25**
Credits :4 **External Marks: 75**

Objective:

To give an introduction to Mathematical techniques in Analysis of P.D.E.

Prerequisite:

This course requires the basic knowledge on partial differentiation and problem solving partial differentiation.

UNIT I **18 hours**

Curves and Surfaces-Genesis of First Order P.D.E-Classification of Integrals-Linear equations of the First Order- Pfaffian Differential Equations-Compatible Systems-Charpit's method.

UNIT II **18 hours**

Jacobi's Method-Integral Surfaces Through a given Curve-Quasi-Linear Equations.

UNIT III **18 hours**

Genesis of Second Order P.D.E-Classification of Second order P.D.E-One Dimensional Wave Equations-Vibrations of an Infinite String-Vibrations of a Semi-infinite string-#Vibrations of a string of Finite length#.

UNIT IV **18 hours**

Vibrations of a String of Finite length (Method of Separations of Variables)-Laplace Equation-Boundary Value Problems-Maximum and Minimum Principles-The Cauchy Problem-The Dirichlet Problem for the Upper Half Plane- The Neumann Problem for the Upper Half Plane-The Dirichlet Problem for a circle-The Dirichlet Exterior Problem for a circle-#The Dirichlet Problem for a Rectangle#.

UNIT V **18 hours**

The Dirichlet Problem for a Half Plane-The Dirichlet Problem for a circle-Heat Conduction Problem-Heat Conduction-Infinite rod case-Heat Conduction-Finite Rod case-Duhamel's Principle-Wave Equation-#Heat Conduction Equation#.

 # # Self-study portion.

SEMESTER II: ELECTIVE II
CLASSICAL DYNAMICS

Course Code : 17PMA2CE2A	**Max. Marks : 100**
Hours/Week : 6	**Internal Marks : 25**
Credits : 4	**External Marks: 75**

Objective:

To study mechanical systems under generalized coordinate systems, virtual work, energy and momentum, to study mechanics developed by Newton, Lagrange and Hamilton Jacobi concepts.

Prerequisite:

This course requires the basic knowledge about mechanics and statics.

UNIT I **18 hours**

Mechanical system – Generalized Co-ordinates – Constraints – Virtual work – #Energy and Momentum#

UNIT II **18 hours**

Derivation of Lagrange's Equation – Examples – Integrals of the motion - Simple Problems

UNIT III **18 hours**

Rayleigh's Dissipation Function – Impulsive motion - #Velocity dependent potentials#

UNIT IV **18 hours**

Hamilton`s principle – Hamilton's equation - #Other variational principles#

UNIT V **18 hours**

Hamilton`s principal function – The Hamilton's – Jacobi equation – Separability - Simple Problems

 # #Self-study portion.

SEMESTER II: ELECTIVE - II
MATHEMATICAL METHODS IN BIOLOGY

Course Code	**:17PMA2CE2B**	**Max. Marks**	**: 100**
Hours/Week	**: 6**	**Internal Marks**	**: 25**
Credit	**: 4**	**External Marks**	**: 75**

Objective:

To introduce Mathematics as a tool in the study of Biology.

Prerequisite:

This course requires the basic knowledge on sequence alignments and DBMS

UNIT I **18 hours**

Sequence alignments, Basic string definitions, The importance of sequence comparison in Molecular Biology, The edit distance between two strings, String alignment, Edit graphs, Stringsimilarity, Alignment graphs, Local alignment, Introduction to Gaps, CDNA matching, A concrete illustration, Choices for gap weights, Time analysis.

UNIT II **18 hours**

Overview of RDBMS, Advantages of DBNS, Normalization, Oracle data types, Introduction to SQL, DDL, DML, & TLC commands. Data definition Language, Data Manipulation Language, Transaction Control & data, Control language Grant & Revoke Privilege Command.

UNIT III **18 hours**

Multiple sequence alignments, the morphological to the molecular, Common multiple alignment methods, multiple sequence alignments, Local alignment gaps, parametric sequence alignments, suboptimal alignments, Multifunction tools for sequence analysis.

UNIT IV **18 hours**

Phylogenetic analysis, Evolutionary Trees and Phylogeny, Ultrasonic trees, Parsimony, Ultrametric problem, Perfect phylogeny, Phylogenetic alignment, Connection between multiple alignment and tree construction, Methods in Phylogeneic Analysis, Profiles and Motifs

UNIT V **18 hours**

Tools in Bioinformatics, Tools for database search using search engines, Finding scientific articles, Finding public data bases, Depositing data into public data bases, Tools for Sequence Analysis, Algorithms issues in data base search, FASTA, BLAST, Amino acid substitution matrices PAM and BLOSSUM

Text Books:

1. George Koch and Kevin Loney; ORACLE 8-THE COMPLETE REFERENCE, Tata McGraw – Hill Edition, 1988.
2. Michael Abbey andMichael J. Correy; ORACLE 8 – A BEGINNERS GUIDE, 1997.
3. Eddy, S.R., Durbin et al; Computational Molecular Biology, 2002.
4. Cynthia Gibas& Per Jampeck, Developing Bioinformatics ComputerSkills; Shroff Publishers and Distributors Private Limited, Calcutta, 2001.
5. Waterman,Michael S, Introduction to Computational Biology, Chapman and Hall, CRC Press, 2000.

Books for Reference:

1. Baxevanis, A.D., and Ouellette, Francis, B.F., Bioinformatics – A practical Guide to theAnalysis of genes and Proteins, JohnWiley and Sons Inc. Publishing, New York, 1998.
2. Dan Gusfield, Algorithms on Strings, trees and sequences, Cambridge University Press, USA.

Dr. R. Jahir Hussain

SEMESTER III: CORE IX
MEASURE THEORY AND INTEGRATION

Course Code : 17PMA3C9 **Max. Marks : 100**
Hours/Week : 6 **Internal Marks : 25**
Credit : 5 **External Marks : 75**

Objective:

To understand measure on a real line, Borel measure, Lebesgue measure, measure on measurable space and product measure.

Prerequisite:

This course requires the basic knowledge about sets, functions and real numbers.

UNIT I **18 hours**

#Set function and properties on sets in real line# -Measure on a real line – Lebesgue Outer measure – Measurable sets – Regularity – Measurable functions.

UNIT II **18 hours**

#Borel set- Continuous function and integral function# - Borel and Lebesgue measurability – Integration of Functions of a real variable – Integration of non-negative functions – General Integral.

UNIT III **18 hours**

#Measure on measurable space# - Abstract Measure Space – Measure and Outer measure – Uniqueness of the extension – Completion of a measure – Measure space – Integration with respect to measure.

UNIT IV **18 hours**

#Countable and additive# - Convergence in measure – Almost uniform convergence - Signed measure and their derivatives – Hahn Decomposition – Jordan Decomposition.

UNIT V **18 hours**

#Product space# - RadonNikodym theorem – Measure and Integration in a Product space – Measurability in a Product Space – Product Measure and Fubini's theorem.

 # # Self-study portion.

Text Book:

G. De Barra,Measure Theory and Integration, New Age International (P) Limited, Publishers, New Delhi Fourth Reprint, (1997).

UNIT I Sections 2.1 – 2.4
UNIT II Sections 2.5, 3.1 – 3.2
UNIT III Sections 5.1 - 5.6
UNIT IV Sections 7.1,7.2,8.1,8.2

UNIT V Sections 8.3, 10.1, 10.2

Books for Reference:

1. M. C. Munroe, Measure and Integration, Addison, Wesley Publishing Company, Second Edition (1971).
2. H.L. Royden and P.M. Fitzpatrick, Real Analysis, Prentice Hall of India**,** Learning Pvt. Ltd., New Delhi, Four Edition (2011).

Prepared by:

Dr. A. Solairaju
Ms. M. S. Afya Farhana
Mr. D. Dhamodharan

SEMESTER III: CORE-X
FUZZY SETS AND THEIR APPLICATIONS

Course Code : 17PMA3C10	**Max. Marks : 100**
Hours/Week : 6	**Internal Marks : 25**
Credits : 5	**External Marks: 75**

Objective:

To study the uncertainty environment, the fuzzy sets incorporates imprecision and subjectivity into the model formulation and solution process. The fuzzy set theory is to make the final crisp values

Prerequisite:

This course requires the basic knowledge about sets, logic, arithmetic and LPP.

UNIT I **18 hours**

From Classical Sets to Fuzzy sets – Fuzzy set: Basic types – Fuzzy sets Versus Crisp sets- Extension Principle for fuzzy sets – Operations on Fuzzy sets – #Types of operations# – Fuzzy complements.

UNIT II **18 hours**

Fuzzy Arithmetic – Fuzzy numbers - Linguistic variables – Arithmetic operations on intervals –Arithmetic operations on Fuzzy numbers – #Lattice of Fuzzy numbers# – Fuzzy equations.

UNIT III **18 hours**

Fuzzy Logic – Multi-valued Logics – Fuzzy Propositions – Unconditional and Unqualified Fuzzy propositions – Unconditional and qualified Propositions – Conditional and Unqualified propositions –Conditional and Qualified propositions – Linguistic Hedges – Inference from conditional Fuzzy propositions- #Inference from conditional and qualified propositions#.

UNIT IV **18 hours**

Fuzzy Decision making – #Individual decision making# – Fuzzy Ranking methods – Fuzzy Linear programming.

UNIT V **18 hours**

Fuzzy Relations – Composition of fuzzy relations – Properties of fuzzy relations.

 # # - Self study

Text Books:

T.B-1 George J. Klir and Bo Yuan, Fuzzy sets and Fuzzy Logic Theory and Applications, Prentice Hall of India, (2004).

T.B-2 A. Nagoor Gani and V.T. Chandrasekaran, A first look at Fuzzy Graph Theory, Allied Publishers Pvt. Ltd., (2010).

UNIT I	Chapter 1 Sections 1.3, 2.3	
	Chapter 3 Sections 3.1&3.2	**T.B-1**
UNIT II	Chapter 4 Sections 4.1-4.6	**T.B-1**
UNIT III	Chapter 8 Sections 8.2, 8.3, 8.5-8.7	**T.B-1**
UNIT IV	Chapter 15 Sections 15.2, 15.6, 15.7	**T.B-1**
UNIT V	Chapter 1 Sections 1.3-1.5	**T.B-2**

Books for Reference:

1. H.J. Zimmermann, Fuzzy Set Theory and its Applications, Allied Publishers Limited (1991).

SEMESTER III: CORE – XI
FLUID DYNAMICS

Course Code	**: 17PMA3C11**	**Max. Marks**	**: 100**
Hours/Week	**: 6**	**Internal Marks**	**: 25**
Credit	**: 4**	**External Marks**	**: 75**

Objective:

To give an introduction to the behavior of fluids in motion and the applications of Complex integration in the analysis of the flow of liquids.

Prerequisite:

This course requires the basic knowledge on physical concepts of liquids and gas.

UNIT I **18 hours**

Real fluids and ideal fluids - Velocity of a fluid at a point - Streamlines and pathlines - Steady and unsteady flows. Velocity potential - Vorticity vector - #Local and particle rates of change# - Equation of continuity - Worked examples - #Acceleration of a point of a fluid#.

UNIT II **18 hours**

Pressure at a point in a fluid at rest - Pressure at a point in a moving fluid - #Conditions at a boundary of two inviscid Immissible fluids# - Euler's equations of motion - Bernoulli's equation - Worked examples - Some flows involving axial symmetry - Some special two dimensional flows - #Impulsive motion#.

UNIT III **18 hours**

Some three dimensional flows - Sources, sinks and doublets - #Images in a rigid infinite plane# - Axis-symmetric flows - Stokes stream function - Some special forms of the stream function for Axis-symmetric irrotational motions.

UNIT IV **18 hours**

Two dimensional flow - Use of cylindrical polar coordinates - Stream function. #Complex potential for two-dimensional irrotational - Incompressible flow# - Complex velocity potential for standard two-dimensional flows - Uniform stream, line sources and line sinks, line doublets, line vortices - Worked examples.

UNIT V **18 hours**

Two dimensional image systems – Milne-Thomson circle theorem - Some applications of the circle theorem - Extension of the circle theorem - Theorem of Blasius - #Use of conformal transformation – Some hydro dynamical aspects of conformal transformation# - Worked example.

 # # Self-study portion.

Text Book:

F. Chorlton, Textbook of Fluid Dynamics, CBS Publication and Distribution (2004).

UNIT I Chapter 2 Sections 2.1 to 2.9
UNIT II Chapter 3 Sections 3.1 to 3.6, 3.9 to 3.11
UNIT III Chapter 4 Sections 4.1 to 4.3, 4.5, 4.5.1

UNIT IV Chapter 5 Sections 5.1 to 5.6
UNIT V Chapter 5 Sections 5.7 to 5.10.2

Books for Reference:

1.Goyal and Gupta, Fluid Dynamics,Edition 17, PragatiPrakashan ,(2011).
2. Raja Subramanian,Fluid Mechanics –Introduction and Application, Jaicopublishing house Edition 2(2008).

Prepared by:

SEMESTER III: CORE – XII
ADVANCED GRAPH THEORY

Course Code	**: 17PMA3C12**	**Max. Marks**	**: 100**
Hours/Week	**: 6**	**Internal Marks**	**: 25**
Credit	**: 4**	**External Marks**	**: 75**

Objective:

To familiarize with various concepts that has proved fruitful in modern graph theory.

Prerequisite:

This course requires the basic knowledge about graph theory.

UNIT I **18 hours**

Connectivity and edge-connectivity – 2-connected graphs – Menger's theorem.

UNIT II **18 hours**

Matching – System of Distinct Representatives and Marriage problem – Covering – 1-factor – Stable Matching.

UNIT III **18 hours**

Independent sets – Edge-colourings – Vizing's Theorem – Vertex Colourings – Uniquely Colourable graphs – Critical graphs.

UNIT IV **18 hours**

Predecessor and Successor – Algorithm – Graceful Labeling – Sequential functions – Magic graphs – Conservative graphs.

UNIT V **18 hours**

Perfect Graphs – Perfect Graph Theorem – Chordal Graphs – Interval Graphs – Comparability Graphs.

Text Book:

M. Murugan, Topics in Graph theory and Algorithms**,** Muthali Publishing House, Annanagar, Chennai, First Edition (2003).

UNIT I	Chapter 3	Sections 3.1 - 3.3
UNIT II	Chapter 6	Sections 6.1 - 6.5
UNIT III	Chapter 7	Sections 7.1, 7.2, 7.4 - 7.7
UNIT IV	Chapter 10	Sections 10.1 - 10.4, 10.6, 10.7
UNIT V	Chapter 12	Sections 12.1 - 12.5

Books for Reference:

SEMESTER III: ELECTIVE - III
MATHEMATICAL STATISTICS

Course Code : 17PMA3CE3A	**Max. Marks : 100**
Hours/Week : 6	**Internal Marks : 25**
Credits : 4	**External Marks: 75**

Objective:

To impact the knowledge in Mathematical Statistics.

Prerequisite:

This course requires the basic knowledge on probability and statistics.

UNIT I **18 hours**

Probability: Definition of Probability-Axiomatic -Definition-Some Properties-Boole's inequality-Discrete Probability Space-General Probability Space-Induced Probability Space-Conditional Probability Measure.

UNIT II **18 hours**

Distribution function of a Random Variable-Decomposition of D.F's-Jordan Decomposition Theorem-Distribution functions of Vector Random Variables-Bivariate case only-Correspondence Theorem. Expectation and Moments: Definition of Expectation-properties of Expectation-Definition of Moments- Moment Generating Function-C_r-inequality-Holder's inequality-Schwartz's inequality-Minkowski's inequality.

UNIT III **18 hours**

Convergence of Random Variables: Convergence in Probability-Convergence almost surely –Convergence in Distribution-Convergence in r^{th} Mean-Monotone Convergence Theorem-Fatou's Theorem- Dominated Convergence Theorem.

UNIT IV **18 hours**

Laws of Large Numbers: Convergence of a Series of Independent Random Variables-Kolmogorov inequalities and almost surely Convergence- Kolmogorov Three-Series Theorem-Stability of Independent Random Variables-Weak Law of Large Numbers-Kronecker's Lemma-WLLN-IID Case-Khintchine's WLLN-Strong Law of Large Numbers-Kolmogorov-SLLN for i.i.d case.

UNIT V **18 hours**

Central Limit Theorem: Introduction-Lindeberg-Levy Theorem-Variable Distributions: Liapounov's Theorem-Lindeberg-Feller Theorem.

Text Book:

B.R.Bhat, Modern Probability Theory Fourth Edition, New Age International, 2014.

UNIT I	Chapter 3	Sections 3.1 – 3.6.
UNIT II	Chapter 4	Sections 4.1 – 4.4 and Chapter 5 Sections 5.1 – 5.3.
UNIT III	Chapter 6	Sections 6.1 - 6.5.

UNIT IV Chapter 10 Sections 10.1 – 10.3.
UNIT V Chapter 11 Sections 11.1 – 11.3.

Books for Reference:

1. Fisz, Probability theory and Mathematical Statistics, Third Edition, John Willey & Sons 1963.
2. Murry R.Spiegal, John Jschiller, R.Aly Srinivasan, Probability and Statics, Third Edition, Shaum's Outline Series, 2010.

SEMESTER III: ELECTIVE-III
COMPUTER ALGORITHMS

Course Code	**: 17PMA3CE3B**	**Max. Marks: 100**
Hours/Week	**: 6**	**Internal Marks: 25**
Credit	**: 4**	**External Marks: 75**

Objective:

To motivate the students to Computational Mathematics, a recent trend in both educational and industrial fields.

Prerequisite:

This course requires the basic knowledge on algorithm and Data structures.

UNITI **18 hours**

Algorithm – Definition, Time Complexity. Elementary Data Structures – Stacks, Queues, Trees, Priority Queues, Heaps, Heapsort, Graphs.

UNITII **18 hours**

Divide and Conquer – General method, Binary search, Merge sort, Quick sort.

UNITIII **18 hours**

The Greedy Method – Knapsack problem, Job sequencing with dead lines, Optimal storage on tapes, Optimal merge patterns.

UNITIV **18 hours**

Basic traversal – Inorder, preorder, postorder traversals, Breadth first search and traversal, Depth first search and traversal Backtracking – Sum of subsets, *n*-Queens problem (*n* = 4, 8).

UNIT V **18 hours**

NP – Hard and *NP* – complete problems – Basic Concepts, Cook's Theorem(Statement only), Conjunctive Normal Form(CNF) – satisfiability reduces to Clique Decision Problem(CDP), The Clique Decision Problem(CDP) reduces to The Node Cover Decision Problem.

Text Book:

Ellis Horowitz, SartajSahni, SanguthevarRajasekaran, 'Fundamentals of Computer Algorithms', Galgotia Publications, 1998.

UNIT I	Chapter I Section 1.1 and Chapter II Sections 2.1 - 2.5
UNIT II	Chapter III Sections 3.1 - 3.5
UNIT III	Chapter IV Sections 4.1 - 4.5
UNIT IV	Chapter VI Section 6.1 and Chapter VII Sections 7.1 - 7.3
UNIT V	Chapter XI Sections 11.1 - 11.3

Books for Reference:

1. Thomas H.Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, 'Introduction to Algorithms', Second Edition, Prentice Hall of India, 2004.

SEMESTER III: EXTRA CREDIT - I
DISCRETE MATHEMATICS

Course Code : 17PMA3EC1 **Max. Marks : 100**
Hours/Week : ---- **Internal Marks : --**
Credits : 5* **External Marks: 100**

Objective:

To introduce topics and techniques of discrete methods and to demonstrate the understanding of Discrete Mathematics by being able to apply logical reasoning to solve a variety of problems.

Prerequisite:

This course requires the basic knowledge on combinations, permutation and recurrence formula.

UNIT I

Computability and Formal Languages: Introduction- Russell's Paradox and Non computability- Ordered sets – Languages- Phrase structure grammar- Types of grammar and Languages.

UNIT II

Finite state machines: Introduction- Finite state machines- Finite state machines as models of physical systems- Equivalent machines- Finite state machines as Languages Recognizers- Finite state languages and type 3- languages.

UNIT III

Permutations, Combinations and Discrete probability: Introduction- The rules of sum and product – Permutations- Combinations- Generation of permutations and combinations- Discrete probability- Conditional probability.

UNIT IV

Discrete numeric functions and generating functions: Introduction- Manipulation of numeric functions- Aysmptotic behaviour of numeric functions- Generating functions- Combinatorical problems.

UNIT V

Recurrence relations and recursive Algorithms: Introduction- Recurrence relations- Linear recurrence relations with constant coefficients- Homogenous solutions- Particular solutions- Total solutions- Solution by the method of generating functions- Sorting Algorithms- Matrix multiplication algorithm.

Text Book:

Liu.C.L. Elements of Discrete Mathematics, McGraw-Hill PVT. LTD. New York, II Edition, 2002.

UNIT I Chapter II Sections 2.1-2.6
UNIT II Chapter VII Sections 7.1-7.6

UNIT III	Chapter III	Sections	3.1-3.7
UNIT IV	Chapter IX	Sections	9.1-9.5
UNIT V	Chapter X	Sections	10.1-10.9.

Books for Reference:

SEMESTER IV: CORE-XIII
FUNCTIONAL ANALYSIS

Course Code : 17PMA4C13	**Max. Marks : 100**
Hours/Week : 6	**Internal Marks : 25**
Credits : 5	**External Marks: 75**

Objective:

To acquire more knowledge on Banach space through Hahn Banach theorem and Hilbert space through operators. Also obtain the knowledge of finite dimensional spectral theory.

Prerequisite:

This course requires the basic knowledge about norm, linear space, inner product.

UNIT I **18 hours**

Banach Space: Definition and some examples - Continuous linear transformations – Hahn Banach theorem.

UNIT II **18 hours**

Banach space (continued): Natural imbedding of N IN N**- Open mapping theorem - Conjugate of an operator.

UNIT III **18 hours**

Hilbert spaces: Definition and some simple properties - Orthogonal complements - Orthonormal sets - Conjugate space H*.

UNIT IV **18 hours**

Hilbert spaces (Continued): Adjoint of an operator - Self-adjoint operators - Normal and unitary operators - #Projections#.

UNIT V **18 hours**

Finite Dimensional spectral theory: Matrices - Determinants and the spectrum of an operator - Spectral theorem.

 # # Self-study portion.

Text Book:

G.F Simmons, Introduction to Topology and Modern Analysis, McGraw Hill, International Book Company, 2014. (21st reprint)

UNIT I Sections 46 - 48
UNIT II Sections 49 - 51
UNIT III Sections 52 - 55
UNIT IV Sections 56 - 59
UNIT V Sections 60 - 62

Books for Reference:

1. Balmohan V. Limaye, Functional Analysis, New Age International Pvt. Ltd., Second Edition (2005).

2. M. Thamban Nair, Functional Analysis, A First Course, Prentice Hall of India (2002).

SEMESTER IV: CORE – XIV
ADVANCED OPERATIONS RESEARCH

Course Code	**: 17PMA4C14**	**Max. Marks :**	**100**
Hours/Week	**: 6**	**Internal Marks :**	**25**
Credit	**: 5**	**External Marks:**	**75**

Objective:
To understand the effect on optimal solution of an LPP due to variations in the parameter; The mathematical techniques to model and analyse decision problems and the mathematical technique to optimize a sequence of interrelated decision over a period of time .

Prerequisite:
This course requires the basic knowledge on LPP, optimization, inventory and decision making.

UNIT I **18 hours**

Integer Linear Programming – Types of Integer Programming Problems – Gomory's All Integer Cutting Plane Method - #Gomory's Mixed Integer Cutting Plane Method#. Sensitivity Analysis – Change in Objective Function Coefficient – Addition of New Variable – Addition of New Constraint.

UNIT II **18 hours**

Goal Programming – Difference between LP and GP approach – #Concept of Goal Programming# - Goal Programming model formulation – Single Goal with Multiple sub Goals – Equally ranked Multiple Goals – Ranking and Weighting of Unequal Multiple Goals - General GP Model – Graphical Solution method of GP – Modified Simplex Method of GP.

UNIT III **18 hours**

Decision Theory – #Steps of Decision making process# – Types of Decision Making Environments – Decision Making Under Uncertainty - Decision Making Under Risk - Expected Monetary Value. Theory of Games – Two Person Zero Sum Games – Games with Saddle Point – Rules to determine Saddle point - Games without Saddle Point - Related problems – Principles of Dominance – Graphical Method.

UNIT IV **18 hours**

Deterministic Inventory Control models – #Meaning of inventory control – Reasons for carrying inventory – Factors involved in inventory problem analysis# - Inventory cost components – Demand for inventory items - Replenishment lead time - Length of planning period – Inventory model building – Single item inventory control modes without shortages – Model I(a): EOQ model with constant rate of demand , Model I(c): Economic production Quantity model when supply is gradual. Single item inventory control models with shortages – Model II (a): EOQ model with constant rate of demand and variable order cycle time.

UNIT V **18 hours**

Dynamic Programming – Dynamic Programming Terminology – Developing Optimal Decision Policy – #General Algorithm# - Dynamic Programming Under Certainty – Model-I: Shortest Route Problem – Model-II: Multiple Separable Return Function and Single Additive Constraint - Dynamic Programming Approach for Solving Linear Programming Problems.

 # # Self-study portion.

SEMESTER IV: CORE - XV
INTEGRAL EQUATIONS AND CALCULUS OF VARIATIONS

Course Code	**: 17PMA4C15**	**Max. Marks**	**: 100**
Hours/Week	**: 6**	**Internal Marks**	**: 25**
Credit	**: 5**	**External Marks**	**: 75**

Objective:

The aim of the course is to introduce to the students various types of integral equations and how to solve these equations and second to introduce the concept of calculus of variation and its applications.

Prerequisite:

This course requires the basic knowledge in eigen values, eigen functions and methods of successive approximation.

UNIT I **18 hours**

Regularity conditions - Special kinds of kernels – Eigen values and Eigen functions – Convolution Integral – Inner or Scalar product of two functions. Integral equations with separable kernels - Reduction to a system of Algebraic Equations - #Examples# - Fredholm Alternative - #Examples#.

UNIT II **18 hours**

Method of successive approximations - Iterative scheme - #Examples# - Volterra Integral Equations - #Examples# - Some results about the resolvent Kernel.

UNIT III **18 hours**

Applications to ordinary differential equations - Initial value problems – Boundary value Problems - #Examples# - Singular integral equations - Abel Integral Equation - #Examples#.

UNIT IV **18 hours**

Calculus of variations and applications - Maxima and Minima – Simplest case - #Illustrative examples#.

UNIT V **18 hours**

Natural Boundary conditions and transition conditions – Variational notation - #More general case # - Constraints and Lagrange multipliers.

 # # Self-study portion.

SEMESTER IV: ELECTIVE - IV
STOCHASTIC PROCESSES

Course Code : 17PMA4CE4A	**Max. Marks : 100**
Hours/Week : 6	**Internal Marks : 25**
Credits : 4	**External Marks: 75**

Objective:

To study the Markov systems, Poisson Processes, Renewal Processes and Queueing Processes.

Prerequisite:

This course requires the basic knowledge in statistical concepts.

UNIT I **18 hours**

Introduction – Specification of Stochastic Processes – Stationary Processes – Second-Order Processes – Stationarity – Gaussian Processes - Markov Chains – Definition and examples – Transition matrix – Probability distribution – Order of a Markov chain – Markov chains as graphs – Higher transition probabilities.

UNIT II **18 Hours**

Classification of States and Chains – Communication Relations – Class Property – Classifications of Chains – Classification of States: First Passage Time Distribution - Determination of Higher transition probabilities – Aperoidic Chain: Limiting Behavior - Stability of a Markov System – Limiting Behavior - #Graph theoretic approach#.

UNIT III **18 Hours**

Poisson Processes - Introduction – Postulates for Poisson process – Properties of Poisson process– Poisson process and related distributions – Interarrival Time – Further Properties of Poisson Process.

UNIT IV **18 Hours**

Renewal Processes - Renewal Processes in discrete time – Relation between F(s) and P(s) – Renewal interval – Generalized Form: Delayed Recurrent Event - Renewal Theory in Discrete Time – Renewal Processes in Continuous Time – Renewal Function and Renewal Density - Renewal Equation.

UNIT V **18 Hours**

Queueing Processes – Steady State Distribution – General relationships in Queueing Theory – Little's Formula – Queueing Model M/M/1: Steady state behavior – Transient behavior of M/M/1 Model.

Course Code	**: 17PMA4CE4B**	**Max. Marks**	**: 100**
Hours/Week	**: 6**	**Internal Marks**	**: 25**
Credits	**: 4**	**External Marks**	**: 75**

Objective:

To study theoptimization, Non-linear programming and Queuing Models.

Prerequisite:

This course requires the basic knowledge on LPP and optimization techniques

UNIT I **18 Hours**

The Structure of a Queuing System - Performance Measure of a Queuing system - Probability Distributions in Queuing System - Classification of Queuing Models-Single Server Queuing Models.

UNIT II **18 Hours**

Multi-Server Queuing Models - Finite Calling Population Queuing Models - Multi-Phase Service Queuing Models.

UNIT III **18 hours**

Unconstrained Optimization - Constrained Multivariable Optimization with Equality Constraints - Constrained Multivariable Optimization with inequality Constraints.

UNIT IV **18 Hours**

The general Non-linear Programming Problem - #Graphical Solution Method# - Quadratic Programming - Applications of Quadratic Programming.

UNIT V **18 Hours**

Separable Programming - Geometric Programming - Stochastic Programming.

 # # Self-study portion.

Text Book

J K Sharma, Operations Research Theory and Applications, 4th Edition, Macmillan Publishers Ltd, 2010.

UNIT I	Chapter 16	Sections 16.1 - 16.6
UNIT II	Chapter 16	Sections 16.7 - 16.9
UNIT III	Chapter 23	Sections 23.1 - 23.4
UNIT IV	Chapter 24	Sections 24.2-24.5
UNIT V	Chapter 24	Sections 24.6-24.8

Books for Reference:

1.Prem Kumar Gupta and D.S. Hira, Operations research, S. Chand (2000).
2. Kantiswarup, P.K.Gupta and Manmohan, Operations Research, Sultan Chand & Sons (2009).

Prepared by:

Dr. R. Jahir Hussain

SEMESTER IV: EXTRA CREDIT-II
DIFFERENTIAL GEOMETRY

Course Code : 17PMA4EC2 **Max. Marks : 100**
Hours/Week : - **Internal Marks : -**
Credits : 5* **External Marks: 100***

Objective:

To understand the curvature and torsion of a space curve, Geodesics and the first and second fundamental forms of a surface.

Prerequisite:

This course requires the basic knowledge in 2-D and 3-D in graphs.

UNIT I

Theory of Space Curve – Arc length –Tangent, Normal, and Binormal – Curvature and torsion of a curve given as the intersection of two surfaces – contact between curves and surfaces – Tangent surfaces, involutes and evolutes – Intrinsic equations – fundamental existence theorem for space curves – Helices

UNIT II

The Metric- Local Intrinsic properties of a surface – Curves on a surface – Surface of revolution – Helicoids – Metric – Direction coefficients – Families of curves – Isometric correspondence – Intrinsic properties

UNIT III

Geodesics – Canonical geodesic equations – Normal property of geodesics – Existence theorems – Geodesic parallels – Geodesic curvature – Gauss-Bonnet theorem – Gaussian curvature – Surface of constant curvature

UNIT IV

The Second fundamental form – Local non-intrinsic properties of a surface – Principal curvatures – Lines of curvatures – Developables – Developables associated with space curves

UNIT V

Developables associated with curves on surfaces – Minimal surfaces – Ruled surfaces – The fundamental equations of surface theory – Parallel Surfaces.

Text Book:

T.J. Willmore, An Introduction to Differential Geometry, Oxford University Press, 2012 (reprint).

UNIT I	Chapter I	Sections 3 - 9
UNIT II	Chapter II	Sections 1-9
UNIT III	Chapter II	Sections 10 -18
UNIT IV	Chapter III	Sections 1- 5
UNIT V	Chapter III	Sections 6 - 10

Books for Reference:

1. D.Somasundaram, Differential Geometry A First Course, Narosa Publishing House, 2005.

2. Dirk J.Struik, Classical Differential Geometry, Second Edition, Addison Wesley Publishing Company, Inc., 1950.
